

## Manuscript Veracity Policy

The Pediatric Emergencies Journal upholds a strict policy regarding the veracity of submitted manuscripts. Authors must ensure that the data and results presented are accurate and honestly reflect the methods used in the research. Any attempt to present false or manipulated information will be considered a serious violation of ethical publication standards. Authors are responsible for ensuring that all data, images, and results reported in their manuscripts are accurate and supported by solid evidence. Additionally, authors must disclose any conflicts of interest or funding related to the research.

The Pediatric Emergencies Journal reserves the right to investigate any suspicion of scientific misconduct and will take appropriate action according to the guidelines of the Committee on Publication Ethics (COPE), available at <https://publicationethics.org/guidance/Guidelines>.

The Pediatric Emergencies Journal takes reader concerns regarding the veracity of published articles very seriously. The options for expressing concerns include the following:

- a. Draft a "Letter to the Editor" detailing the concerns. The authors will be notified and given a chance to respond. The journal will then electronically publish the concern and response together in an upcoming issue. If the authors do not respond within a reasonable period, the letter of concern will be published electronically with a note that the authors did not respond.
- b. Write directly to the Editor-in-Chief at the following email: [carlos.luaces@sjd.es](mailto:carlos.luaces@sjd.es)
- c. If an article is found to have a fundamental flaw that would invalidate the results, the author will be notified and asked to retract the article. If they agree, it will be retracted. If the authors do not agree, the letter of concern will be published, and a revised version of the original article will be labeled as having a serious concern regarding veracity, to the extent possible given the restrictions of various Pediatric Emergencies Journal repositories.
- d. If the flaw can be corrected by the article's authors, a correct analysis of the original article will be published within a reasonable timeframe (no more than three issues from the publication of the article in question) or the article will be retracted.
